
Paint Booth Exhaust Flow Switch

- Reliable No Moving Parts Design
- Low Flow Sensitivity
- Explosion Proof for Hazardous Areas
- 316L Stainless Steel Sensor
- Perfect for Interlocking with Spray Equipment and Ventilation Fans
- Large Inventory & Same Day Shipment
- NEMA 4X for Tough Environments

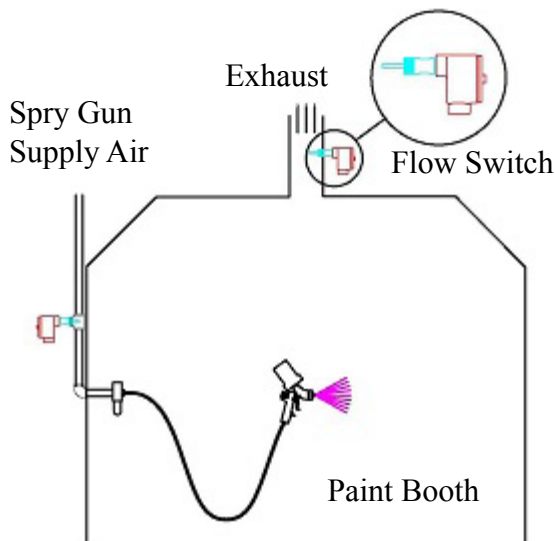

FX Series Flow Switch

[Brochure \(PDF\)](#)
www.ameritrol.com

The FX series flow switch provides reliable service in both paint booth exhaust and spray gun supply air monitoring applications. To maintain safe ventilation this dependable no moving parts design is ideal for monitoring dirty paint booth exhaust. The adjustable switch point can easily be set to trip when exhaust flow rates drop below acceptable levels.

Flow switches monitoring paint booth exhaust provide the most direct method of assuring a fresh air environment for operators and protecting personnel from dangerous or hazardous fumes. The relay output from the paint booth exhaust flow switch can be utilized to turn on a warning light, actuate a horn or interlock with spray and ventilation equipment so that spray equipment cannot be turned on unless ventilation is at acceptable levels.

An Ameritrol FX series flow switch can also be located on the spray gun supply line air and used to automatically turn on ventilation equipment so that the gun cannot be operated without proper ventilation.

The FX series paint booth exhaust and spray gun air supply flow switches are designed to provide reliability in all conditions at a very cost effective price.
